Consult the Schrader TPMS Application Guide
for a full vehicle listing for each service pack.

Part #20598

Schrader, the global leader in TPMS technology, recommends that the TPMS sealing components be replaced each time a tire is removed from the rim. The replacement components, contained in our TPMS service packs, maintain the critical primary seal which keeps tires inflated to their proper OEM placard pressure.

Schrader does not endorse the use of non-OE validated parts because Schrader has not tested the compatibility of products of any supplier other than Schrader for fit and suitability for use in conjunction with Schrader parts. Defects, damages or losses caused by use of non-Schrader products, replacement parts and/or service packs are not covered by Schrader's limited warranty.
